

# IMPACT<sup>LITE</sup>

IMPACT<sup>LITE</sup> is an integrated grants management system configured specifically for community, coalition, and small non-profit organizations. IMPACT<sup>LITE</sup> is a tool that helps you manage your organization. It combines financial management, compliance and monitoring, progress reporting, and performance evaluation into a single system. IMPACT<sup>LITE</sup> is based upon MOSAIX's multi-level IMPACT<sup>SAPT</sup> grants management system used by many States to manage both their state block grant program as well as other federal and state based prevention programs.

IMPACT<sup>LITE</sup> is part of the MOSAIX IMPACT Suite of Grants Management Software Services. The IMPACT Suite is capable of supporting all of your data collection, management, and reporting needs for grantee performance management and grants management. IMPACT can be utilized to plan, manage, and report within and across organizations, grant programs, or time periods. IMPACT will change the way that your agency manages its work and shares the results of its efforts.

## Coalition Management

IMPACT<sup>LITE</sup> is a single tool to organize, manage, and track your coalition membership and representation. Partner Organizations and as well as Individuals can be entered in the system providing a central location of all of your members contact information. In order to expedite tracking of meeting attendance, members can be grouped into individual subcommittees. IMPACT<sup>LITE</sup> provides a single repository for all information regarding your organization's meetings including the date, topic, agenda, meeting minutes, and attendance.

## Goals, Objectives, Programs & Activities

IMPACT<sup>LITE</sup> supports the use of the Strategic Prevention Framework (SPF). For planning purposes, IMPACT supports the identification and management of goals, objectives, programs and activities. For implementation purposes, IMPACT supports both single and recurring services. You can associate various outcomes with each goal, objective, program, or activity. For example, you could identify a long-term outcome and associate it with a goal. You could then associate an intermediate outcome with an objective or program and a short-term outcome with an activity. This is only an example. IMPACT will allow you to create these associations in a manner that you prefer.

Logic Models and Work Plans are supported in IMPACT. You can upload a single logic model and associate it with problem behaviors and goals.

IMPACT supports data collection, management, and reporting for both programmatic and community-based prevention efforts. Deliverables can easily be viewed and shared amongst management and even evaluation teams within an organization. This centralized collection of data and information supports an organized data effort focused on promoting the overall sustainability for the funding of prevention efforts.

## IMPACT Fund Management

IMPACT<sup>LITE</sup> incorporates certain features of the full fund management capabilities of IMPACT<sup>FM</sup>. The features included will assist you with managing the funds received and budgeted by your organization. You can create annual organizational budgets and then allocate those funds to the various programs you manage. This will give you a full picture of how you plan to spend the funds available to your organization in any period.
